

SLOAN®

FLUSHOMETER PERFORMANCE IN A TANK TOILET

THE HIGHER STANDARD FOR LOWER FLUSH VOLUMES

When municipalities require lower flush volumes, contractors, engineers and owners have a choice: Invest in the infrastructure to install flushometer toilets or reduce your overall expectations with gravity toilets.

But there's an alternative option: pressure-assisted toilets from Sloan®.

Sloan invented pressurized flushing, and no other brand has sold more pressure-assisted products. With a Flushmate® vessel supplying the pressure and Sloan's reputation for durability providing peace of mind, you'll be confident in your toilets' performance for years to come.

Sloan pressure-assisted toilets are perfect for:

Hotel Rooms

Restaurants,
Nightclubs and Bars

Gas Stations

Strip Mall
Retailers

Schools and
Preschools

Houses of
Worship

Small to
Medium Offices

Medical Offices
and Facilities

Government
Buildings

Assisted Living
Facilities

Dormitories

Apartments/
Residential

Pressure-assisted flushing gives you the performance you want when you can't install a flushometer. For the style and dependability you trust, make sure your toilet says **Flushmate**® in the tank and **Sloan**® on the china.

ADVANTAGES OF SLOAN PRESSURE-ASSISTED TOILETS

Your Sloan pressure-assisted toilet looks like an ordinary tank-type toilet, and it works the typical way. Its performance, however, is anything but ordinary.

Contractors

Fewer “double flushes,” because the higher pressure clears the drainline on the first flush.

No tank condensation due to the insulating properties of the pressure vessel.

Virtual elimination of tank rocking due to three-point tank mounting, which also allows a tighter, more reliable gasket seal that minimizes leaks and damaged parts.

Even the highest-traffic toilets will be far less likely to back up or clog, because the pressure supplied by the Flushmate® vessel pushes waste out of the bowl and into the drainline far faster than a gravity flush.

Sloan pressure-assisted toilets are ideal for renovations because you can easily upgrade from a standard gravity toilet to a superior pressure-assisted toilet.

**SMOOTH,
TROUBLE-FREE**

Facility Managers

Smooth, trouble-free activation because Sloan's cable-activated flush handle replaces the clunky metal linkage systems other pressure-assisted toilets use. No flappers and no chains also means fewer adjustments are needed, so there's less chance of breakage.

Fastest refill time, taking half the time of competitive pressure vessels. Faster turnaround decreases long waits to use the toilet.

A cleaner bowl, because the rim jets have higher velocity and pressure that create a better scrub.

Engineers

Extraordinary MaP scores. Many brands can achieve a 1,000g MaP score, but Sloan's pressure-assisted toilet has reached as high as 1,500g in tests.

Sustainable water savings because, unlike gravity toilets with flush volumes that can be manipulated, Sloan pressure-assisted toilets are non-adjustable.

50% longer drainline carry. ASME requires a 40-foot drainline carry, but Sloan's pressure-assisted toilets can flush more than 90 feet.

**50% LONGER
DRAINLINE CARRY**

SLOANTEC® GLAZE KEEPS BOWLS CLEANER, LONGER

Hydrophobic, oleophobic
SloanTec glaze repels solid
waste up to seven times
better than competitive
glazes to keep china
looking cleaner, longer.
It's an available option on
all Sloan pressure-assisted
toilet models.

WHEN YOU CAN'T INSTALL FLUSHOMETERS...

... Sloan pressure-assisted toilets are a simple, cost-effective alternative.

- **They install exactly the same way as gravity toilets** and require the same basic water supply pressure (20–25 psi).
- **They require no extra infrastructure at all**, making them ideal for renovation or replacement as well as new construction.
- **Yet they deliver performance similar to flushometer toilets** — even at flush volumes as low as 1 gallon per flush.

No one handles pressure like Sloan

Sloan invented pressurized flushing more than 110 years ago and is the world leader in flushometer innovation. Our pressure-assisted toilets deliver flushometer performance at low flush volumes with basic plumbing requirements.

Available pressure-assisted toilet options

- Standard and ADA-compliant toilets available
- Three flush volumes (1.0, 1.28 and 1.6 gpf)
- Left or right flush handles
- Elongated bowl with siphon jet flushing action
- Standard 12" rough-in
- Compliances available: ADA, BAA, CalGreen*, CEC*, cUPC GREEN*, NOM, WaterSense*
- Bowls and tanks sold separately or as a combo for Buy America Act compliance
- Bowls with SloanTec® hydrophobic glaze available

*1.0 and 1.28 gpf only
